Orchardgrass – Foundation, Registered and Certified Production

General Requirements for All Pedigreed Seed Crops

The basic standards for all crops are set out in <u>General Requirements for All Pedigreed Seed Crops</u>. In addition, the following standards apply to Orchardgrass.

Land Requirements*

Inspected Crop	Must NOT be grown on land which:	
Foundation	 In any of the 5 years prior to the year of seeding produced: a non-pedigreed crop of Orchardgrass. a different variety of Orchardgrass. In any of the 3 years prior to the year of seeding produced: a pedigreed crop of the same variety. 	
Registered	In any of the 3 years prior to the year of seeding produced:a crop of Orchardgrass.	
Certified	ed In any of the 2 years prior to the year of seeding produced: a crop of Orchardgrass. 	

*Except where chemical control measures acceptable to the CSGA have been taken to eradicate growth from a previous crop of Orchardgrass.

Crop Inspection

Orchardgrass crops must be inspected when the crop is headed and before harvest.

Age of Stand

The maximum number of years pedigreed seed can be produced from a stand of Orchardgrass established with Breeder or Foundation seed is outlined below. The class that can be produced from a stand varies with the class used to establish the crop, the classes of seed through which a given variety may be multiplied and the number of years the stand has been in production.

When crop is established with:						
Breeder see variety with Registered o	out a	Breeder : variety Register	with a	Foundation seed of a variety without a Registered class	Foundation variety Registere	with a
Foundation C	Certified	Foundation	Registered	Certified	Registered	Certified
3 yrs. +	3 yrs.	3 yrs. +	3 yrs.	6 yrs.	3 yrs. +	3 yrs.

Crop Standards

Isolation

The isolation must be reasonably free from plants that may cross pollinate with the inspected crop. The risk to varietal purity posed by plants that may cross pollinate varies depending on area, density, stage of maturity and distance from the inspected crop. These factors will be taken into consideration in determining the pedigreed status of the inspected crop. Not more than 3 plants per square meter, on average, of plants that may cross pollinate with the inspected crop.

Minimum Isolation Distances Required from an Inspected Crop to Other Crops:

1. Varietal Purity

- a. Inspected pedigreed Orchardgrass of same variety and class
- b. Inspected pedigreed Orchardgrass of same variety, different class
- c. Planted with Certified seed of the same variety
- d. Different varieties of Orchardgrass or non-pedigreed Orchardgrass

* For Certified crop status only, provided the pedigree of the Certified seed used can be established.

	Minimum Isolation Distance		
Area of Inspected Crop	Foundation	Registered	Certified
5 acres or less	400 m (1312 ft)	300 m (984 ft)	150 m (492 ft)
More than 5 acres	300 m (984 ft)	100 m (328 ft)	50 m (164 ft)

2. Mechanical Purity

a. Bentgrasses, Bluegrasses, Redtop

Distance 3 meters (10 feet)

Distance

Table below

1 meter (3 feet)

3 meters (10 feet)

3 meters (10 feet)*

Border Removal in Lieu of Isolation:

For seed crops in excess of 5 acres, removal of a border from the inspected crop in lieu of the required isolation to a different variety or non-pedigreed Orchardgrass is permitted as outlined in the table below. The border must be allowed to shed pollen before being discarded.

	Border Removal in Lieu of Isolation Distances			
Inspected Crop	Actual isolation distance from contaminating source	Distance to be removed from the inspected seed crop		
Foundation	300 m (984 ft) +	0 m (0 ft)		
	200 - 299 m (656 - 983 ft)	3 m (10 ft)		
	150 - 199 m (492 - 655 ft)	5 m (16 ft)		
	less than 150 m (492 ft)	5 m (16 ft) + 150 m (492 ft) minus the actual isolation distance		
Registered	100 m (328 ft) +	0 m (0 ft)		
-	75 - 99 m (246 - 327 ft)	3 m (10 ft)		
	50 - 74 m (164 - 245 ft)	5 m (16 ft)		
	less than 50 m (164 ft)	5 m (16 ft) + 50 m (164 ft) minus the actual isolation distance		

	Border Removal in Lieu of Isolation Distances			
Inspected Crop	Actual isolation distance from contaminating source	Distance to be removed from the inspected seed crop		
Certified	50 m (164 ft)	0 m (0 ft)		
	30 - 49 m (98 - 163 ft)	3 m (10 ft)		
	25 - 29 m (82 - 97 ft)	5 m (16 ft)		
	less than 25 m (82 ft)	5 m (16 ft) + 25 m (82 ft) minus the		
		actual isolation distance		

Maximum Impurity Standards

- 1. Varietal Purity (off-types/other varieties on average in either 10 or 100 m²)
 - a. Foundation 3 plants/100 m²
 - b. Registered 1 plant/10 m²
 - c. Certified 1 plant/10 m²
- Mechanical Purity (other crop kinds, the seeds of which are difficult to separate from the seeds of the inspected crop on average in either 10 or 100 m²; for Orchardgrass that includes Bentgrasses, Bluegrasses and Redtop)
 - a. Foundation 3 plants/100 m²
 - b. Registered 1 plant/10 m²
 - c. Certified $1 \text{ plant}/10 \text{ m}^2$
